Hi

I am a ultimate++ user on linux and I started to use another GPL os called Syllable that is cool. I have posted a reply in the forum talking about U++ and they think that it would be cool a port of it on Syllable. How I can do this? Because Syllable althougth is 99% POSIX compliant, it has its own graphic interface api. Can you put it on the roadmap page? (Syllable --> Considered)
