Well, I took a break and played with the SVN tree some more...

After adding:

```
-l/usr/lib/gtk-2.0/include \  
-l/usr/include/pango-1.0 \  
-l/usr/include/cairo \  
-l/usr/include/atk-1.0 \
```

I got much further, but still dies with odd errors...

Anyway, gtk-config gives me the 1.2 info and no way to switch to 2.0 conveniently. Durring a recent uprade I may have hosed something in my system. I'll check into it this weekend.
