luzr wrote on Fri, 02 February 2007 12:30Please try this:

Draw/DrawTextXft.cpp line 186 and 196
...

It helped a lot, looks just like other gnome applications on first sight. I will post a magnified screenshot later to see if they are exact or just similar.

luzr
I see. What is your system settings btw?

I'm not sure if I found the correct ones, but I can't find it elsewhere:

~/.fonts.conf

and the settings are:

rgba rgb
hinting true
hintstyle hintfull
antialias true
