Mine looks identical after the non-Bold = 100 fix.

Another bug: what about hot keys in menu being not underlined?

edit BTW:

notice different "i" padding in File, I think TheIDE is nicer.

Than again, I'm sort of missing some tool to check out the subpixel rendering, when I use gimp to magnify it, I get whole pixels (colors) magnified so it's hard to check the true quality of render.
