Third, once I executed "theide", I could find no way to ADD an existing tree to the IDE. That is,
having a directory of c++ files in a subdirectory "testing", how to make the IDE "see" these files. In
fact, I gave up.

I understand that this is irritating. However, it is direct result of package/nest/assembly system,
which makes things simple and effective in the long run. Things are different, it is like importing
.doc file into .xls... (or .odt into .ods

Finally, as there does not appear to be a downloadable version of the documentation, perhaps
provide a link to some site-grabber like http://www.httrack.com (free and cross-platform).

You have already all documentation downloaded. Just, in TheIDE, press F1.
