I forgot that gtk-2.0 is configured using pkg-config instead of gtk-config. So appending the following in appropriate places gets much further along.

```
CINC += `pkg-config gtk+-2.0 --cflags`  
LIBS  = `pkg-config gtk+-2.0 --libs`
```

beta3 compiles and runs fine. The source in the SVN however compiles using -DflagNOGTK, but the first time I moved the mouse it crashed (I could run through various steps via key commands). I got the following error:

```
XIO: fatal IO error 0 (Success) on X server ":0.0" after 6720  
requests (6718 known processed) with 0 events remaining.
```

When I compile without flagNOGTK, I get errors that it "cannot find -lgtk-x11-2.0".
/usr/lib/libgtk-x11-2.0.la but probably needs libtool to link it as there is not a static version, just .so and .la. I'll play with it later as I get some time.
