Is there an easy way to set the limits of a splitter's position? i.e. I want the minimum to be 50% and maximum to be 70%.

```
Currently I've got it working by hand like so (in my TopWindow subclass): virtual void Paint(Draw& w) {
  int splitterPos = verticalSplitter.GetPos();
  if(splitterPos < 5000)
   verticalSplitter.SetPos(5000);
  else if(splitterPos > 7000)
   verticalSplitter.SetPos(7000);
  TopWindow::Paint(w);
}
```

This flickers while trying to drag the splitter out of bounds though. A Splitter::SetBounds(int min, int max) or something method might be nice, but I'm not sure how to go about this most efficiently.

I might be getting it completely wrong, since I'm still very inexperienced in UPP and GUI programming in general.
