MikeyV wrote on Mon, 05 February 2007 14:36 I'm sure this is something simple, but I couldn't find an answer using the forum search, or in the examples.

How do I turn on word wrapping for a button?

One option to get text of button more interesting is to make it QTF. You can do it for most labels by prepending text with "\1" (works in Layout designer too), in that case text is interpreted as QTF.
