fair enough. After pointing this out I very much agree with you

the linux default is to make a copy of the sources and build in \$(USER)/upp. how about a directory named log which is a sibling of out directory (ie \$(USER)/upp/logs)? That way we do not have to make a seperate directory in home or root.

BTW, I'm looking forward to the day I learn u++ enough that I can actually contribute instead of wasting your time.
