darrs wrote on Tue, 06 February 2007 14:29Another suggestion.

In the editor you could put a little "Topic++" button in the margin next to global declarations / definitions (I'm assuming Assist++ knows how to recognize these). Clicking that would pop-up a small UWord window to document that function / variable (etc). Hovering over the button could show a pop-up tool-tip with that documentation.

Exactly. That is what I mean by "let us finish the idea first"
