Can the icon of a TrayIcon be changed after construction?

Is there some wrapper function which can be used to hide the taskbar button of an application, so that the application can "minimize to the tray", or do I have to use Win32 for that?

I would like to monitor a web server from an u++ app and dislpay an auto-hiding balloon notification if the server fails. Also the status could be displayed in a tooltip when the mouse is hovered over the tray icon. Are there methods for the notification and tooltip in the TrayIcon?
