the point of this bugfix is that if one keeps calling waitpid  
with an explicite pid, then using the pid "0" should be  
avoided at all cost, as it does act in an unexpected way:  
instead of waiting for the process with pid 0, it just  
waits for any process with the same group-id as the calling  
program, and thereby the exitcode could get lost...

Thanks, fix applied.

Mirek
