luzr wrote on Fri, 23 February 2007 12:28Well, about enum -> integral type warnings... I am aware of them, but in this case I play passive resistance to GCC... (I believe it should not warn there and at least provide a switch to avoid that warning).

Yeah, I didn't get the idea what's wrong with it from the gcc warning, I can understand this. Still I prefer no warnings and the typecasting makes sense there because the target variable is byte or dword, so the enum will be "casted" anyway.
