In TheIde keys are then accessed with code such as:
IdeKeys::CUTLINE().keybut in my example case the code

No, it is IdeKeys::AK_CUTLINE().

reference/AK is quite a good demonstration of AK stuff...

Quote:
ExampleKeys::COMBINE(AK_, KEY1)().key

Fortunately, there is need for COMBINE here....

Quote:
I also think this stuff needs documenting (unless I'm being thick and just can't find it), since it's a
nice feature that would be useful in many apps. I'll do this myself if you like and perhaps flesh out
my example as well.

Example is there, however, documentation would be nice. Especially if you would manage to do it
in Topic++ so that I can directly put it into the uppsrc.
