I'm running the Linux distribution Gentoo with cross-platform development to Win-XP. What distro are you using? That will give me a clue on what suggestion to make on how to proceed.

EBo --

Kubuntu 6.10
kernel 2.6.17
gcc 4.1.1 (default system compiler, used by TheIDE probably?)
gcc 3.4.6
gdb 6.4.90

Problems with debugging (been toying with it little bit more):
When I run some example with F5, I can't stop it, and if I add breakpoint during execution, it gets ignored.
When I have some breakpoint added ahead of F5, it works, and while the application is broken, I can use stop debug and edit breakpoints. But once I rerun it with F5, it again ignores everything.
