I have found something working

```
IntVector(const IntVector &src, int) {
::new IntVector;
for (int i = 0; i < src.GetCount(); i++)
   At(i) = src[i];
   name = src.name;
   Cout() << "DCC\n";
}</pre>
```

I would need to add some check in order to make sure that src is not picked... But really there should be a nicer solution.
