I get this problem in GridUtils.h compiling the HomeBudget example... seems flagGCC is un#defined when it's expected to be for GCC?

----- GridCtrl (GUI GCC32 SHARED BLITZ LINUX) (3 / 12)
BLITZ: GridBase.cpp GridDisplay.cpp GridCtrl.cpp GridSort.cpp GridUtils.cpp

/home/oisin/upp/uppsrc/GridCtrl/GridCtrl.cpp:534: warning: enumeral mismatch in conditional

Also, now scrollbar arrows don't look right for me - seemed ok in rc2...?

Firefox is running on the left with the standard scrollbars for this theme (I'm running XFCE), with the U++ ide on the right showing oversized scroll arrow symbols.
