apls wrote on Sun, 11 March 2007 14:02 Who knows how to remove one or all column(s) of arrayCtrl?

I find AddColumn() but no RemoveColumn() or anything else....

Clear() just clear the data...

Hi,

you can hide the unwanted columns with

```
...  
arr.HeaderObject().HideTab(col1);  
arr.HeaderObject().HideTab(col2);  
...
```

But if you want to remove them physically perhaps you can try to remove all the array and then build it again with the new columns.
