Subject: segfault while starting theide

there are 2 files which cause a segfault when compiled
speed-optimized. I solved the problem by compiling them
with a different gcc-option:

for Core/Vcont.cpp I need "-Os -finline-length=119", and
for RichText/ParaTypes.cpp I need "-Os -finline-length=141".

is my gcc-3.3.1 broken in the aspect of function-inlining?
or is it upp's fault? I guess I need a newer gcc...
