I Think, you should use const SqId& and DropDownList& instead of const char \*, so you could use something like:

Populate(Code, Area, istdEnlType);

```
void SATS3::Populate (const SqId& field, const SqId& table, DropDownList& control) {  
    SQL*Select(field).From(table);  
    while(SQL.Fetch())  
        control.Add(SQL[0]);  
}
```
