luzr wrote on Thu, 02 February 2006 14:28: Right now, we have pure reference counted string. Not bad, but I now see better performing implementations that can save quite a lot of memory as well (small string optimization).

Is that small string optimization similar to what the Mitor class does? By the way where is the "Mitor" name coming from? I can't seem to find anything with this name on google.
