Trying to build TheIDE under Windows with GCC (MinGW) surprises me.

Building with the UPP-included GCC 3.42 works buts says:

Linking...
(option '-O 2' ignored)
___main: duplicate
-> used: libmingw32.a:gccmain.o:1
-> discarded: libgcc.a:__main.o:1

Trying to build with GCC 4.11 fails saying:

Linking...
...\MinGW411\bin\ld.exe: crt2.o: No such file: No such file or directory
collect2: ld returned 1 exit status

Trying to build with GCC 4.12 fails saying:

Linking...
...\MinGW412\bin\ld.exe: cannot find -lws2_32
collect2: ld returned 1 exit status

As far as I remember Upp 2007.1rc2 built fine as with GCC 3.42 as with GCC 4.11. (GCC 4.12 was not yet available.)
