Here they are ...

A command line I'm using to generate vc71 project files:

```
perl D:\bin\MPC\3.4.90\mwc.pl -nocomments -type vc71 -name_modifier *_vc71 -include  
mpc/config -relative UPP_ROOT=2007.1rc3 2007.1rc3/upp_ws.mwc
```

The icpp-problem is still not solved.
