valkyrie (a GUI client for valgrind) makes that report much more readable especially for people who got used to "purify" from Rational Software.

I found kcachegrind very useful as a valgrind frontend.

kcachegrind is a frontend for cachegrind, which is a profiler. In terms of Rational Software it is "quantify".

By default valgrind runs memcheck (valgrind --tool=memcheck).
cachegrind is a part of valgrind starting from version 3.2 I believe.
