Hi,

I'm usin Upp 605 on a RedHat Entreprise linux 4 to to create an application which have to run on the second monitor.

When I execute the programm on the first monitor, there isn't any problem but when I execute it (or exemples from upp) on the second monitor, the main appears on the first (very degradeted) and this error is displayed a lot on the console of the second screen :
"X Error: BadMatch (invalid parameter attributes), request: X_CopyPlane, resource id: 41943066 = 280001A"

If anyone have an idea of the problem ??

Thanks in advance

Ptilo
