- In build methods, are Shared libs/All shared supposed to link U++ dynamically? If yes it does not seem to work.

"Shared libs" means TheIDE should \*prefer\* shared libraries when linking (it has corresponding gcc and msc flags).

"All shared" means "Shared libs" + all packages should be compiled as .dll/.so. This is more or less experimental feature, the U++ policy is to link statically, but for debugging purposes, dynamic linking can be faster. I am afraid that at the moment, this does not work in Win32 (because of the U++ library being compiled, not TheIDE).
