victorb wrote on Sat, 31 March 2007 06:16 Thanks for the info.

I have just noticed an other issue.

If I have

```
class ADDONEXPORT MyClass
{
    void MyFunc();
}
```

and I try to "Copy as definition/declaration" MyFunc() in my C file, I'll get:

```
void ADDONEXPORT::MyFunc()
```

The main drawback of current C++ parser is the inability to deal with macros....

Mirek
