Novo wrote on Tue, 10 April 2007 23:23Sorry. I do not want to be boring, but isn't easier to use specialized libraries for this purpose? Something like ACE (http://www.cs.wustl.edu/~schmidt/ACE-overview.html).

Those guys are 15 years ahead of you.

Maybe. How does the above rewrite look like in ACE? (I was unable to find anything about thread pool in docs).

Moreover, the thread pool patter is well known. However, the aim of CoWork is to provide interface/implementation that exploits the rest of U++ library, like callbacks (perfect fit here btw).
