thanks again Mirek. Have looked for LocalLoop in the documentation and on the forums etc but not finding it. Any examples you know of?

LocalLoop only appears to have three loopy functions: GetMaster; SetMaster and Run so am not sure what to do with it.

Nick

p.s. a search for getmaster or setmaster return nothing so am a bit stumped but if I can get it working nice all in a derived class of TreeCtrl, might be a good addition to UPP? Will definitely post the class on here as an example if i can get it working
