jimmygyuma wrote on Wed, 11 April 2007 19:13My main focus is image editing both for photos and for creating custom video effects and transitions.

Actually, I think that with current Image infrastructure, video effects and transitions would be joy to implement

In fact, there is nothing too special about it, just the fact RGBA pixels are so easily and uniformly accessible now.

In the same time, I doubt any toolkit would provide such effects.

When might that proposed special package appear?
Thanks for your help.

Well, approximate roadmap goes like this:

- new Core with better MT support (this comes in next dev)
- MacOS X11 support
- D&D and related issues (e.g. floating bars)
- TheIDE improvements (C++ parser etc...)
- Advanced drawing routines

Anyway, these things can be happening any time....
