Transparent();

Not that "Transparent" is in fact just painting hint - in theory, all would work with this flag ON for all Ctrls. However, to avoid flickering, only Ctrls that really are transparent should have this activated.

Also, if what you need is StaticRect that is always transparent, rather use ParentCtrl.

Mirek

Where is THE LEVEL? I can't see any numbers.
I want:
SetColor(SRed, alpha=50%);
