Sorry guys, I should have been checking the forumns a little more. Did you get the problem solved?

A couple things:
 1) The home/end key is extremely annoying... but you can, at least, fix a few applications like Terminal to behave as expected.

 2) I did not ever install anything from Mac ports. As I recall, the only thing I had to install was libpng. I just downloaded it from the the libpng site and it compiled cleanly. I, of course, installed X11 first from the DVD.

 3) I have used theide and my software on PPC: 10.3.x and 10.4.{8,9}, and Intel: 10.4.{8,9} without major issues.

 4) I can not get a Universal app compiled with theide... but I can manually from a terminal.

 5) I have to edit Core/Core.h to include flagNOGTK in the OSX11->GUI area. Could we default that to include it, since I doubt many OSX users have GTK?
