I'll have to take a look at that...

I have a project where I have to display a bunch of minimally processed data (preferably in real-time). I was able to spawn gnuplot to do some of the processing and display and am considering rewriting the GUI interface for it using U++ (so that I can embed a bunch of the functionality). I'm waffling back and forth with simply transliterating the old programs Pascal code or going the gnuplot route... The paint code example might just give me a leag upp
