Hi,

I tried to see this code running to learn more about U++ and the connection to Oracle databases, but the only result I obtained were errors (a lot of them, unfortunately...). I tried to compile with MingW (and MSC) the code below:

```
#include <Core/Core.h>
#include <Oracle/Oracle8.h>
#include <iostream>
CONSOLE_APP_MAIN
Oracle8 oracle;
Cout() << "Connecting...\n";
Cout() << "Connect state: " << oracle.Open("scott/tiger@prev") << "\n";
Sql sql(oracle);
String cmd = "select * from emp";
Cout() << "Executing " << cmd << "...\n";
sal.Execute (cmd):
Cout() << "Execute done...\n";
    // Everything right here..
while(sql.Fetch()) // this line wrong.. in the function Fetch(), a ASSERTION error...
   Cout() << String(sql[0]) << ": " << String(sql[1]) << "\n ":
}
```

The code above I named it "SQL_Oracle2", because I checked the sintax and compared the code with another example, named "SQL_Oracle". Probably I'm doing something wrong, but I could't find why I had problems with a little piece of code. Please take a look in the attached file, also. If anybody could help, any advice should VERY appreciated...

Tks in adv, Sven
