Hi,
I am using UPP in windows a long time (I have a Oracle database and connect to It by UPP...).
Now in my work some machines are migrating to Linux, I try the SQL_Oraclein my KUBUNTU
6.10 but did no compile. The other examples work very well (now OpenGL work too). I have the
client .so librarys and sdk oracle oci but did not work.

What I am doing wrong?

thanks a lot,
