Hi, newbie to upp speaking

I've a simple question, just to confirm after a brief source code navigation:

We simply can make TopWindow sizeable with the pair `Sizeable().Zoomable()`, but is it possible to handle dynamic size for widgets within layouts ?

If I take the AddressBook example, there're two elements in the windows: the tab and the array. I'd like to make them grow or shrink when I size the top window.

I saw in the layout designer some buttons to play with horizontal and vertical sizes, but this doesn't seem to be their purpose

Thanks in advance, upp isn't finished, but has a brilliant future

Edit: topic name by fudadmin
