Hi fallingdutch!

Thanks for your help! Step for step it works. The problem was "URL". When I assign values manually (Port, Host, ...) it works. Now I have to pack all the stuff into a thread, because I dont want the application to freeze. I know the solution from forum with the callback in execute - but its not really fluid.

>>> First I want to get any response from a https-site. Then I will continue to play around with certificates.

Is there any way to read values out (certid, cn, ...) of server certificate? I cant find any method to do this.

WebChaot.
