Subject: PNG to IML?

Hi,

How do I import a PNG file into IML? I have an existing PNG file that I would like to use as IML resource. I tried copying and pasting but the alpha data is always lost. IML Designer supports alpha image editing but doesn't seem to support pasting such data from an image editing program.

Any way I can convert PNG files into *.iml?
I am using U++ 2007.1

Thanks,
