Hi fallingdutch!

All seems to work ok, but ...

I implemented SSL in httpcli-Demo and in my own program.

In httpcli I allways get an zero return error from ssl socket - but code 200 from http - so all works fine, but I dont know, what I should do with this error.

In my own program on first download all works fine and I get the same error after first try (error: 0 - invalid server response...).

```
[error] socket(1904) / SSL_read: SSL_ERROR_ZERO_RETURN (6)
[status 200] HTTP/1.1 200 OK
```

Do you know whats wrong with ssl? Did you have similar responses in past?

Thanks,

WebChaot.

Here the lines I added to httpcli, which results in the error described above:

```
=====
if(sslcontext.IsEmpty())
{
    sslcontext.Create(SSLv2_client_method());
    sslcontext.VerifyPeer(false);
}

    if(!SSLClientSocket(client.socket,sslcontext,client.host,client.port))
{
    puts("No SSL");
    return;
}

if (!client.socket.IsOpen())
{
    puts("No Socket");
    return;
}
```

```
}

puts(client.socket.GetInfo(SSLInfoCertSubjectName()).ToString());

String content = client.ExecuteRedirect();

puts("[error] " + Nvl(client.GetError(), "OK (no error)");
puts(NFormat("[status %d] %s\n", client.GetStatusCode(), client.GetStatusLine()));
=====
```
