Hello Michael,

to get rid of the error you need to install the MySql development files.

SQL with upp is pretty easy, first you have to open a database then start using it like this (some simple examples)

```
mySQL*INSERT(MyTable)(COLUMN1,"data")(COLUMN2,"data2");
```

```
mySQL*Update(MyOtherTable)(COLUMN6,"changed data").Where(NAME=="Michael");
```

```
mySQL*Delete(MyTable).Where(ToBeDelete==true);
```

```
mySQL*Select(ID).FROM(MyOtherTable).Where(NAME=="Michael");
```

The only thing you need is a .sch file defining to schema of your database (which tables which columns) UPP creates everything to access it then: Have a look at the SQLApp example.

Bas
