mezise wrote on Sun, 06 May 2007 09:27Mysql libs are not bundled with TheIDE:

- go to <http://dev.mysql.com/downloads/>, choose Mysql version you need and while installing just check dev files option
- set correct paths to installed Mysql bin, include and lib directories (TheIDE menu: Setup/Build methods../)
- if you compile using free MSC71 in Debug mode and have error about lacking file 'libcpmtd.lib' change method e.g. to Optimal

Michal

Thanks alot, Michal - thats it!

Now i can compile the example, great.

And thanks alot to you, Bas. I think there will be a lot of further questions coming up... I'm very new to upp and have only basic skills in C/C++. I tried several C++ Frameworks over the years and U++ seems to be what i was looking for.

Thanks again.

Michael
