I now have a Schema-File where i defined my tables. How do i use it? When i use your examples i got several error because some things are undefined, like below:

Quote:J:\Entwicklung\UPP\prohibisZA\database.cpp:25: error: `ID' undeclared (first use this function)

I know, there is the SQLApp Example... but at the moment its no help for me. I do not understand how the schema-file works with my code. I think i need a little help to get into the usage of sql and u++.

Michael
