this is what you need in a header file (see SQLApp.h):

```
#define SCHEMADIALECT <plugin/sqlite3/Sqlite3Schema.h> //not sure atm which file defines the  
SCHEMADIALECT for MySQL!!!
```

```
#define MODEL <SQLApp/SQLApp.sch> //your .sch file here
```

```
#include <Sql/sch_header.h>
```

and in a sourcefile

```
#define SCHEMADIALECT <plugin/sqlite3/Sqlite3Schema.h> //again you need the one for  
MySQL
```

```
#include <Sql/sch_source.h>
```

that should do the trick,

Bas
