Hi Daniel,
thanks for the suggestions,

I wanted to have it out as fast as possible so it can be tested very soon, by possibly many users.

I will create the Name Makro and now you, Tom and me thought about a high-level Interface which implements the "run-stuff" and maybee even more.

I will leave it the way it is and add a higher-level interface just adding a "SIMPLE_SERVICE_APP_MAIN" makro.

Bas
