unodgs wrote on Wed, 16 May 2007 03:00I discovered that IsUpper for '_' return false. Because of that my function:

```
bool IsUpperString(const char *q)
{
    while(*q)
        if(!IsUpper(*q++))
            return false;
    return true;
}
```

did not work well for strings like NUMBER_10_AND_20 and I had to modify it to:

```
bool IsUpperString(const char *q)
{
    while(*q)
    {
        if(*q != '_' && !IsUpper(*q))
            return false;
        q++;
    }
    return true;
}
```

Of what letter is '_' uppercase variant?

I think the check should look like this

```
if(IsLetter(*q) && IsUpper(*q))
```
