Quote:The aging of the edit marker works, now. Plus some small bugfix, some files were marked edited, even if there was no edit

I also noticed a bug when one undo changes. Markers should be cleared then.

Quote:So I would suggest:

One hot key to clear all markers in all files. No toolbar icon.

One option in the settings to disable the edit /errors / warning markers together.

I agree + hotkey to clear markers in one file.
