To be able to use Sqld::As() with PostgreSQL, you have to change Sql/SqVal.cpp:

```
SqCol Sqld::As(const char *as) const
{
//return id.IsNull() ? ToString() : ToString() + SqlCase(MSSQL, " as ")(" ") + as;
return id.IsNull() ? ToString() : ToString() + SqlCase(MSSQL | POSTGRESS, " as ")(" ") + as;
}
```
