To be able to use `SqlId::As()` with PostgreSQL, you have to change `Sql/SqlVal.cpp`:

`SqlCol SqlId::As(const char *as) const`

```
{
    //return id.IsNull() ? ToString() : ToString() + SqlCase(MSSQL, " as ")(" ") + as;
    return id.IsNull() ? ToString() : ToString() + SqlCase(MSSQL | POSTGRESS, " as ")(" ") + as;
}
```
