Subject: can't use SetLabel and Tip for Option (only one or the other)

If a Tip is set in the Layout Designer for an Option control, and a label is set also in the designer (in the SetLabel section), there is a compile error generated:
C:/MyApps/test.lay:2: error: 'class Upp::Ctrl' has no member named 'SetLabel'

Removing either the tip or label from the designer (and manually setting it in code) fixes the compile issue.

I've attached a simple test case.
