I've looked at the .lay file, and for my test case (attached above) this is what it looks like:

```
LAYOUT(testLayout, 232, 148)
  ITEM(Option, optCheck, Tip(t_("Remove this tip from the layout to compile")).SetLabel(t_("Check Me")).LeftPosZ(72, 84).TopPosZ(64, 20))
END_LAYOUT
```

Now, if I swap the order of Tip and SetLabel to this:

```
LAYOUT(testLayout, 232, 148)
  ITEM(Option, optCheck, SetLabel(t_("Check Me")).Tip(t_("Remove this tip from the layout to compile")).LeftPosZ(72, 84).TopPosZ(64, 20))
END_LAYOUT
```

it compiles without error and works as expected. I have no experience with the upp source, so I'm not even sure where to begin looking to fix this.
